

FOCUS TECHNOLOGY SOLUTIONS INC. HONORED AS RECIPIENT OF 2009 EMC VELOCITY² AUTHORIZED SERVICES NETWORK QUALITY AWARD.

Seabrook, NH— June 17th, 2009 — Focus Technology Solutions Inc. today announced it has received the 2009 EMC Velocity² Authorized Services Network (ASN) Quality Award from EMC Corporation for achieving outstanding service excellence and delivering exemplary levels of customer satisfaction as demonstrated by EMC Velocity Authorize Services Network Quality (ASNQ) program.

The ASNQ program is a project-specific survey program designed for Velocity² ASN partners to solicit customer feedback about the quality of their service engagements. The survey results enable partners to engage in a continuous improvement process, resulting in a higher level of professional services quality and customer satisfaction.

“We are very excited about receiving this award from EMC. It represents for us a validation that our service methodology, field engineers, project managers and customer service staff are delivering quality to our customers,” said Skip Schnable, Director, Integrated Services Group, Focus Technology Solutions Inc.

“We are excited that Focus Technology Solutions has achieved such outstanding levels of customer service and satisfaction in delivering EMC solutions,” said Frank Seiferth, Senior Director, EMC Global Services. “Customers know that they can trust Velocity² ASN Partners to deliver the best-in-class products and services they need, and Focus is a leader in delivering customer satisfaction and success.”

The Velocity² ASN program is a select community of Velocity² partners, certified by EMC, that complements and extends EMC’s service offerings and expands EMC’s Global Services coverage capabilities.

About Focus Technology Solutions Inc.

Focus is an IT infrastructure optimization company. We achieve infrastructure optimization by optimizing four critical infrastructure areas: Server, Storage, Network & Data Center. Through optimization of these four critical areas Focus helps their customers realize significant cost reductions in IT operations, while improving overall application availability and performance.
